

# Microsoft ADC Cybersecurity Skilling Program

## Week 5 Assignment 8

Student Name: DEBORAH BINYANYA

Student ID: ADC-CSS02-25051

## AZ-500 Learning Path

### Introduction

In this task, the focus is on securing identity and access within Microsoft Azure—one of the most critical areas in cloud security. We will explore two key modules: **"Manage security controls for identity and access"** and **"Manage Microsoft Entra application access."** These modules provide practical guidance on implementing secure authentication methods such as multifactor authentication (MFA), configuring conditional access policies to manage risk-based access, and protecting user accounts from identity-based threats. Additionally, we will learn how to register and manage enterprise applications in Microsoft Entra ID (formerly Azure Active Directory), assign and control app permissions, and enforce governance using features like consent policies and application proxy. Mastering these concepts is essential for designing a resilient identity infrastructure that ensures only authorized users have appropriate access to cloud resources.

### Tasks Completed

Manage security controls for identity and access

<https://learn.microsoft.com/api/achievements/share/en-us/DeborahBinyanya-1253/W2SY7A3N?sharingId=BBBCB3F098199A41>

Manage Microsoft Entra application access

### AZ-500: Secure identity and access

<https://learn.microsoft.com/api/achievements/share/en-us/DeborahBinyanya-1253/URBWY8R3?sharingId=BBBCB3F098199A41>

## Conclusion

By completing these modules, I've gained valuable knowledge on how to secure identities and manage application access in Microsoft Azure. I learnt how to implement robust authentication methods, apply conditional access to control entry points, and respond to identity-based risks using Microsoft Entra features. Additionally, I explored how to manage and secure enterprise applications—registering them, controlling permissions, and enabling secure access. These capabilities are crucial for maintaining a strong security posture in the cloud and ensuring that access to resources is both secure and well-managed.
